

# DIY Pinwheels

## Supplies:

Ruler, scissors, push pins, hole punch, pencils and paper

1. Place your template on paper to trace, then cut around edges. Use the diagonal lines to cut your flaps.
2. Make five holes using the hole punch (see template for placement).
3. Fold your flaps parallel with the cut. Make sure the end reaches beyond the middle of the pinwheel. Hold them in place in the center.
4. Take a push pin and poke through the end of each flap where you made hole punches. Once through all four flaps, press through to the back of your pinwheel.
5. Push pin through the eraser of a pencil, making the end of the push pin flush with the eraser.
